- Scroll hingga ke bawah lalu Add Step, lalu ikuti langkah dibawah

There are no steps defined

A test is a sequence of steps coupled with conditions, test inputs and expected results. Create or import test steps to define the test.

- Isi data test Case

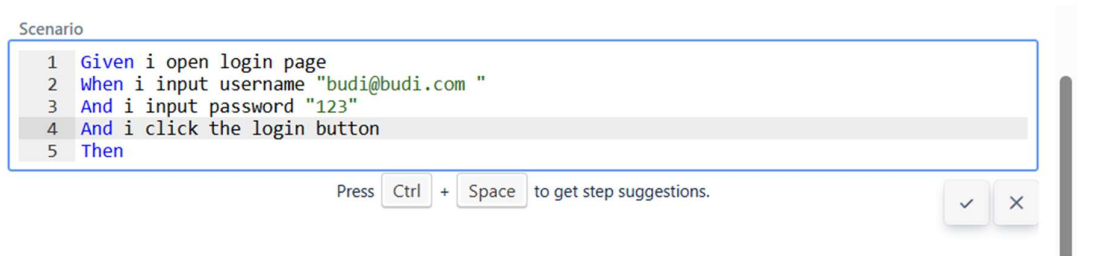

The screenshot shows a test case editor interface. The main area is divided into three sections: 'Action', 'Data', and 'Expected Result'. The 'Action' section is currently active and contains the text 'Data'. The 'Data' and 'Expected Result' sections are empty. On the right side, there is a 'Details' panel with fields for Assignee (Evi Fitriya), Labels (None), Parent (None), Team (None), Development (Create branch, Create commit), Reporter (Evi Fitriya), and Test Status (Open Test Status). At the bottom, there is a comment section with a text input and buttons for 'Can I get more info...', 'Status update...', and 'Thanks...'. A 'Pro tip' message at the bottom left says 'press M to comment'.

The screenshot shows the same test case editor interface. The 'Expected Result' section is now filled with the text 'ulasan Pengguna berhasil terlihat/terbaca'. The 'Action' and 'Data' sections are empty. The 'Details' panel on the right remains the same. The comment section at the bottom is also present. A 'Pro tip' message at the bottom left says 'press M to comment'.

- Jika sudah maka akan seperti ini tampilannya:

The screenshot shows the final state of the test case editor. The 'Action' section is filled with a list of steps: 'Buka Website Jelajah Kuliner', 'Masuk Halaman Dashboard', 'Klik Salah satu PKL', 'Klik Menu "Ulasan"', and 'Baca Ulasan'. The 'Data' section is filled with 'none'. The 'Expected Result' section is filled with 'ulasan Pengguna berhasil terlihat/terbaca'. The 'Details' panel on the right remains the same. The comment section at the bottom is also present. A 'Pro tip' message at the bottom left says 'press M to comment'.

Berikut apabila menggunakan test type cucumber

Given = ketika sebelum melakukan apa-apa

When = ketika user input data

And = atribut dari when misal datanya banyak

Then = expexted result
